front-end developer
interaction designer

INTRODUCTION

Sandrina is a front-end developer with a strong passion for interactive design. She loves to explore new concepts and meaningful transitions that connect people with digital interfaces. From creative to technical she can hold any role.

TL;DR:

ABOUT

From a very young age and having always had a passion for the digital world, Sandrina started learning and exploring the merge between design and technology, through foruns and online resources. Later that developed into taking initiative and doing several online courses in HTML, CSS and Javascript.

Graduated in 2015 in Communication Design by Lisbon's University of Fine Arts and there had the chance to explore the interactive components of the digital world. As part of the Almeida Garret program, she went to Porto's University of Fine Arts where acquired new digital knowledges.

One month after graduating, she began to work for a startup called Pure, as UI UX designer. There it was possible to optimize and learn the best communication methods between designers and developers.

Still in 2015 she started a post graduate degree in Digital Experience Design, where the main focus was designing solid UI and UX, as well as applying code best practices. Simultaneously, also started working at Zaask as a front-end developer.

After concluding the post graduation in July 2016, she carried on learning new things everyday at work and through a self taught path, while actively engaging in communities like Stackoverflow and Codepen. During free times, she likes to solve bugs and continues to explore better interactive solutions for the Web.
